Mr. Aman

Faculty Mentor:

Mr. Indrajit Lahiri

Enter to Learn, Leave to Succeed

Title Of Project

Application of Data Analytics, Digital Outreach, and Business Process Optimization: A Case Study of Airway Media

SUBMITTED BY

Harshita Tripathi

Roll No – 25PGDM081

Organization: Airway Media

Internship Duration: 15rd April 2026 – 30th June2026

Corporate Mentor:	Faculty Mentor:
Mr. Aman	Mr. Indrajit Lahiri

CERTIFICATE OF COMPLETION

(Faculty Mentor)

This is to certify that **Harshita Tripathi** (Roll No. **25PGDM081**) of PGDM Batch 2025-2027 has completed the Corporate Internship Program at Airway Media for the **period 15 April 2026 to 30 June 2026**. Project title: **Application of Data Analytics, Digital Outreach, and Business Process Optimization: A Case Study of Airway Media.**

The student has also completed the Intellectual Outcome submitted separately on FIIB HUB.

Faculty Mentor name**: Indrajit Lahiri**

Signature:

Date: 12th July 2026

ACKNOWLEDGEMENT

I would like to express my sincere gratitude to Fortune Institute of International Business (FIIB), New Delhi, for providing me with the opportunity to undertake the Corporate Internship Program, which has been an invaluable learning experience.

I extend my heartfelt thanks to my faculty mentor, Mr. Indrajit Lahiri, for his continuous guidance, valuable suggestions, and constant encouragement throughout the internship and the preparation of this report. His academic insights and constructive feedback greatly contributed to the successful completion of this project.

I am deeply grateful to Mr. Aman, Corporate Mentor at Airway Media, for providing me with the opportunity to work on meaningful projects and for his continuous support throughout the internship. His practical guidance, industry knowledge, and trust enabled me to gain hands-on experience in financial analysis, market intelligence, business development, and recruitment processes.

I would also like to thank the entire team at Airway Media for creating a collaborative and professional work environment. Their cooperation, support, and willingness to share knowledge helped me understand real-world business operations and enhanced my professional skills.

Special thanks to the faculty members and staff of FIIB for their continuous encouragement and for providing a strong academic foundation that enabled me to apply classroom concepts in a practical business environment.

Finally, I would like to express my sincere gratitude to my family and friends for their unwavering support, motivation, and encouragement throughout my internship and in completing this report.

Harshita Tripathi

PGDM – Finance

Roll No. 25PGDM081

Batch (2025 – 2027)

Fortune Institute of International Business (FIIB)

EXECUTIVE SUMMARY

This Final Corporate Internship Program Project Report presents a comprehensive evaluation of the progress, key learnings, process diagnostics, and strategic optimization workflows developed during my internship at Airway Media from 15 April 2026 to 30 June 2026. The internship provided deep exposure to recruitment operations, digital outreach initiatives, business development activities, and data analytics. By mapping and evaluating real workflows, this case study applies core management concepts to improve corporate efficiency, establish structured reporting frameworks, and reduce administrative frictions within a real organizational environment.

The primary focus of the internship involved supporting and optimizing the recruitment and talent acquisition pipeline. Responsibilities included managing university placement relations, sharing internship job descriptions, profile screening, conducting Group Discussions (GDs), interviewing candidates, and facilitating final onboarding activities. During this tenure, corporate outreach was successfully established with 104 colleges, job requirements were shared with 36 institutions, approximately 40 student profiles were processed, 28 candidates were shortlisted, over 50 formal interviews were executed, and 23 interns were successfully onboarded to the organization.

To build long-term employer branding and tap into low-cost candidate acquisition networks, digital outreach initiatives were launched from scratch by setting up and growing Airway Media's LinkedIn corporate business page. This digital pipeline quickly reached 25 organic followers and directly converted inbound talent acquisition leads, highlighting the growing role of corporate social profiles in scaling employer visibility without marketing expenditures.

Beyond talent management operations, structural analytical capabilities were developed through an Advanced Excel data optimization project that featured custom reporting tools, data cleaning arrays, lookups, and visual dashboards. Parallelly, macro-financial research was conducted into SEBI regulations, Indian capital market ecosystems, and clearing architectures to deepen strategic corporate finance perspectives.

A critical finding during this study was that candidate acquisition functions must be tracked as a disciplined conversion funnel rather than an unmonitored linear process. Severe administrative leakages and coordination friction were identified in legacy manual data logging routines. This report documents the diagnosis of those frictions and evaluates a series of optimization pathways culminating in an AI-assisted automation model using LLM engines (ChatGPT, Gemini, and Claude) to draft communications, parse incoming resumes, and automate tracking arrays. Ultimately, this project, titled "Application of Data Analytics, Digital Outreach, and Business Process Optimization: A Case Study of Airway Media," successfully demonstrates how data management and light-touch AI modeling can drastically optimize startup workflows, reduce administrative overhead, and drive placement-ready management talent.

1. PROGRESS SUMMARY

Overview

The corporate internship at Airway Media progressed across structured operational milestones, analytical tracking initiatives, digital footprint creation, and technical workflow testing between 15 April 2026 and 30 June 2026. The early segment of the project emphasized core execution parameters: initializing college reach networks, setting up database structures, screening applicants, and conducting multi-stage interviews. As these foundational elements stabilized, the scope expanded into digital outreach management, direct business development pipelines, financial regulatory research, and low-cost generative AI process automation workflows.

The project is executed under the title “Application of Data Analytics, Digital Outreach, and Business Process Optimization: A Case Study of Airway Media”. It establishes a diagnostic bridge showing how low-overhead data systems and automated coordination can optimize hiring speed, enhance employer brand indicators, and reduce operational bottlenecks within a fast-moving EdTech firm.

Completed Activities

Recruitment Operations

A highly disciplined university outreach layout was built to fuel corporate internship talent pipelines. Legacy unstructured contacts were consolidated into an integrated tracking database, and formal communication frameworks were executed with institutional training and placement officers.

Key quantitative operational metrics achieved:

- Formally logged and contacted 104 universities across regional clusters.
- Disseminated specialized internship Job Descriptions (JDs) with 36 campus cells.
- Received and processed approximately 40 institutional applicant profiles.
- Administered initial profile screening matrices mapped to organizational criteria.
- Shortlisted 28 high-potential candidates for multi-stage evaluations.
- Facilitated and graded 5 live Group Discussion (GD) evaluation rounds.
- Conducted and scored more than 50 technical and cultural interviews.
- Successfully completed corporate onboarding protocols for 23 active interns.

Digital Outreach Activities

To maximize institutional outreach visibility and construct a localized employer brand, an official corporate LinkedIn business page was established and scaled from scratch.

Key digital outcomes completed:

- Programmed and organized the company's LinkedIn business landing interface.
- Scaled audience metrics organically from 0 to 25 professional followers.
- Captured 2 high-intent, inbound internship recruitment inquiries directly via the digital funnel.

- Generated localized marketing content to enhance corporate brand presence among student demographics

Business Development Contribution

To experience standard revenue-generation cycles, direct commercial outreach support was extended to Airway Media's subsidiary consumer venture, Pikaso Entertainment.

Key revenue output achieved:

- Generated gross revenue of ₹1,998 by pitching, negotiating, and closing two multi-month premium subscription contracts.

Analytical and Finance-Oriented Projects

To enhance technical decision-support structures, two corporate data research projects were fully executed.

Advanced Excel Project

A structured data architecture project was engineered, directly utilizing:

- Dynamic Pivot Tables and relational data grouping.
- Advanced data vector lookup parameters (XLOOKUP, INDEX-MATCH).
- Systematic data cleaning logic, error trapping, and Flash Fill normalization.
- Strict data validation matrices to remove manual spreadsheet entry errors.
- Dynamic operational executive dashboards featuring custom reporting visualization tools.

This assignment directly established a practical mastery of cleaning messy operational data inputs and assembling decision-ready business reporting frameworks.

SEBI and Trading Research Project

A rigorous finance research paper was developed to unpack the macro-regulatory environment, detailing:

- Statutory powers, mandates, and economic functions of SEBI.
- Structural architecture of Indian capital markets, exchange matching engine logic, and liquidity networks.
- Risk parameters in spot equity execution versus leveraged derivative settlement protocols.
- Short-term and long-term trading mechanics, automated algorithmic routing, and clearinghouse structures.
- Statutory investor protection setups and systemic margin compliance parameters.

This rigorous review expanded my core comprehension of institutional regulatory frameworks and institutional trading risk dynamics.

Changes During Internship

The operational scope of the assignment adjusted dynamically, moving past an early talent-acquisition-only focus. Initially structured to handle basic manual cold outreach and candidate tracking , the corporate mentor expanded the project parameters to incorporate complete digital lifecycle design, direct subsidiary revenue extraction, data cleaning optimization frameworks, and prototype AI workflow automation experiments. This

progression provided wide cross-functional exposure, demonstrating how data governance, marketing channels, and algorithmic leverage interact to determine startup agility.

Key Learning Outcomes

Significant managerial insights were extracted over the course of the execution lifecycle:

- Talent sourcing operations act precisely as a multi-stage conversion funnel, demanding tight lead management to mitigate volume leaks across intermediate screening steps.
- Tier-2 academic institutions yielded vastly higher conversion responsiveness and placement officer engagement compared to premium tier institutions.
- Multi-stage, structured follow-up cadences improved college cell response metrics by a substantial margin over single-point cold outreach.
- Centralized, validated spreadsheet data tracking layouts eradicated communication overlap and optimized visibility over active pipelines.
- Inbound organic digital traffic via structured professional networks like LinkedIn scales company reach with near-zero financial acquisition costs.
- Technical skill matrices and communication baseline readiness vary widely between regional campus populations, necessitating early, automated screening filters.
- Eliminating manual data discrepancies directly drives down back-office tracking time while increasing administrative conversion velocity.

Pending Activities

The final phase of the internship scope addresses the following components:

- Compiling structural pipeline conversion data for ultimate stakeholder review.
- Finalizing onboarding records for the incoming trainee cohort.
- Polishing interactive data dashboards and formula models within the analytics project.
- Assembling the step-by-step logic and prompt books for the AI-assisted pipeline.
- Mapping structural process optimization recommendations to corporate leadership.
- Drafting the formal Integrated Capstone reference section.
- Bundling compliance artifacts, certificates, and final similarity verification logs.

Next Milestone

The upcoming project milestone concentrates on synthesizing raw data tracking fields into a sophisticated, executive-ready analytical framework. The analytical push will explicitly deliver empirical recruitment funnel conversions, digital outreach return-on-engagement metrics, and documented prompt engineering logs from the AI-assisted testing phase. The target is to hand over a verified, replicable process optimization model capable of permanently upgrading Airway Media’s back-office productivity.

2. INTERIM EVIDENCE LOG

The data logs and progress tracking verified throughout this project are backed by real operational artifacts collected across the internship timeline. These verifiable assets include university communications, structured outreach tracking spreadsheets, finalized role

descriptions, applicant assessment matrices, Group Discussion evaluation charts, organic LinkedIn analytics sheets, custom Excel dashboard workbooks, SEBI regulatory research reports, subsidiary revenue logs, and prompt architecture screenshots. Collectively, these records validate a deep, hands-on engagement with talent acquisition pipelines, digital marketing platforms, operational data analytics, and workflow design parameters.

3. ORGANIZATIONAL SETTING AND ASSIGNMENT FOUNDATION

3.1 Company Snapshot

Airway Media operates as an agile, EdTech-driven firm specializing in corporate internship packaging, technical talent acquisition support, student engagement infrastructure, digital outreach management, and localized business development strategies. The enterprise acts as an active intermediary between higher education academic cells and corporate talent teams to source, train, and place student candidates while managing screening, onboarding, and basic professional upskilling routines. Strategically, Airway Media addresses the structural mismatch between standard academic curricula and fast-evolving industry requirements by packaging specialized corporate internships as structured learning models.

3.2 Core Business Activities

The organizational runtime of Airway Media centers on the following business blocks:

- Enterprise internship hiring facilitation and localized corporate talent acquisition.
- Multi-regional institutional outreach and university partnership development.
- End-to-end candidate pipeline logistics, preliminary screening, profile grading, and final onboarding.
- Continuous student career development coaching and skills mapping.
- Outbound digital outreach positioning, corporate employer branding, and digital talent pool cultivation.
- B2C subsidiary business development, subscription funnel management, and digital service monetization.

These business blocks drive the company's objective of building accessible professional entry pathways for students while maintaining a robust, pre-screened talent supply chain for partnering companies.

3.3 Assignment Foundation

The corporate project was initialized with a strict mandate to manage high-volume campus outreach networks and optimize backend talent acquisition funnels. Initial deliverables demanded standard institutional data building, direct relationship navigation with college placement offices, and profile shortlisting routines.

However, as the firm’s lean startup setup required cross-functional agility, the corporate assignment evolved to study systemic process improvements. This structural shift led to building digital marketing tracks on LinkedIn, executing subscription sales cycles for Pikaso Entertainment, normalizing corporate tracking sheets via advanced formula setups, analyzing

capital market frameworks, and testing automated AI workflows. This comprehensive approach allowed for the practical application of core management models across several operational clusters, showing exactly how lean firms can leverage data discipline and basic automation to bypass resource limitations.

4. INTERNSHIP OVERVIEW AND SUPERVISION STRUCTURE

4.1 Internship Role

The operational assignment required serving as a cross-functional Management Trainee across talent acquisition, analytics, corporate social management, and business development units. Core activities spanned cold multi-channel college placement negotiations, candidate tracking, interview grading, employee onboarding logistics, LinkedIn page growth hacking, and the technical assembly of data clearing models and regulatory research frameworks. The role provided a high-pressure environment to translate theoretical corporate models into real process outcomes.

4.2 Departmental Exposure

Strategic operational perspective was cultivated through structured exposure across the following functional areas:

- Recruitment Logistics and Funnel Operations
- Strategic Talent Sourcing and Employer Branding
- Outbound Digital Outreach and Community Cultivation
- Direct Sales, Subscription Management, and Business Development
- Business Analytics and Reporting Infrastructures
- Macro-Financial Analysis and Regulatory Compliance Projects

This cross-functional setup showed exactly how small operational errors in data collection can compound into massive execution bottlenecks down the line.

4.3 Reporting Structure

Internship Duration: 15 April 2026 – 30 June 2026

Corporate Mentor: Mr. Aman, HR Manager

Faculty Mentor: Dr. Indrajit Lahiri

Operational execution was monitored under a dual-oversight framework. Daily corporate deliverables, interview grading calibration, and digital channel strategies were supervised directly by Mr. Aman (HR Manager), ensuring adherence to strict internal corporate quality baselines. Academic milestones, data framework modeling, and research alignments were closely calibrated under the academic direction of Dr. Indrajit Lahiri, ensuring strong theoretical anchoring. Structured performance evaluations and feedback loops kept the operational outputs sharply aligned with business requirements.

4.4 Scope of Learning

The learning scope integrated capabilities across high-volume human resource metrics, B2B university relationship negotiation, inbound digital engagement strategies, direct conversion sales psychology, relational data modeling via Excel, and advanced prompt engineering architectures across mainstream LLM software. Combining raw daily execution tasks with high-level analytical modeling established a mature understanding of process architecture, lean constraints, and technology-driven process automation.

5. PROBLEM DIAGNOSIS AND PROJECT FOUNDATION

5.1 Organizational Problem

A detailed diagnostic assessment of Airway Media's core operational flows revealed a significant reliance on manual back-office tasks, disconnected follow-up communication, and unstructured spreadsheet tracking setups. When handling large, fast-moving flows—such as managing 104 university networks, screening hundreds of incoming applications, scheduling multi-stage interviews, and executing onboarding documents—the administrative overhead grew exponentially, causing noticeable process drag and team fatigue.

Furthermore, digital marketing efforts lacked clear performance analytics, making it difficult to objectively measure profile engagement or track inbound lead conversion costs. Without a centralized, automated data structure, the firm faced common operational leaks: delayed applicant follow-ups, manual reporting errors, and a lack of real-time visibility across the candidate pipeline. This project directly addresses these structural challenges by showing how data analytics, digital outreach strategies, and basic AI automation can combine to eliminate process friction, reduce manual hours, and optimize startup operations.

5.2 Internship Project Title

Application of Data Analytics, Digital Outreach, and Business Process Optimization: A Case Study of Airway Media

5.3 Stakeholder Mapping

The execution and downstream outputs of this corporate case study affect the following internal and external stakeholders:

- Corporate Leadership and Executive Management
- Talent Acquisition Operations and Core HR Personnel
- University Placement Directors and Academic Partners
- Active and Prospective Internship Applicants
- Airway Media's Organic Social Media and Digital Audience
- Pikaso Entertainment's Business Development and Revenue Generation Units

6. PROJECT OBJECTIVES

The specific, strategic objectives mapped for this corporate project are:

- To dissect, organize, and map the core recruitment operations and talent sourcing loops at Airway Media.
- To mathematically assess university outreach pipelines to find the highest-converting campus clusters.
- To build a corporate LinkedIn channel from zero to validate low-cost inbound talent acquisition paths.
- To design custom Advanced Excel databases and reporting tools to replace fragile, manual data entry.
- To conduct a structured macro-financial study on SEBI market frameworks and clearing house protocols.
- To uncover operational leaks and structural friction points across the firm's core backend workflows.
- To prototype an automated AI-assisted workflow using mainstream LLM engines to accelerate administrative communication and data processing.
- To present leadership with actionable, data-backed process recommendations that directly lower costs and increase operational speed.

7. WORK EXECUTED – COMPLETED DELIVERABLES

7.1 Recruitment Operations

The core of the assignment required directly managing and optimizing the firm's talent acquisition lifecycle. This end-to-end process required building university data files, coordinating campus schedules, drafting role profiles, sorting candidates, managing group assessments, and executing final onboarding paperwork.

To scale up hiring velocity, a strict conversion-based approach was implemented across the operational pipeline. Key volume targets achieved during this phase:

- Systematically identified, verified, and cold-contacted 104 university placement engines.
- Successfully negotiated the formal publication of active corporate JDs across 36 colleges.
- Captured and parsed approximately 40 detailed institutional applicant folders.
- Designed and applied screening filters to assess core candidate competencies.
- Shortlisted and processed 28 candidates for multi-tiered live assessments.
- Managed, coordinated, and scored 5 live interactive Group Discussion panels.
- Executed and evaluated more than 50 technical, behavioral, and screening interviews.
- Completed onboarding and background checks for 23 active incoming interns.

This hands-on role provided practical insights into high-volume applicant screening, structural scheduling, multi-channel communication management, and standard HR delivery metrics.

7.2 College Outreach Activities

University partnership management served as the primary sourcing engine for the firm's corporate programs. A data-backed approach was introduced to build out a clean, validated

database of institutional placement offices, completely removing duplicates from past contact sets.

Operational workflows included:

- Identifying high-potential campus populations across regional boundaries.
- Verifying placement director phone data, email lines, and past performance indices.
- Initiating formal, multi-touch cold email and phone campaigns to pitch partnership parameters.
- Deploying structured corporate promotional content and exact role profiles.
- Implementing systematic follow-up timelines to re-engage slow campus networks.
- Real-time monitoring of campus-wide applicant flows to evaluate source quality.

This systematic push emphasized how important source optimization, persistence in follow-ups, and relationship building are when navigating institutional bureaucracies.

7.3 Candidate Screening and Selection

The applicant vetting loop was designed as a multi-tier filtering gate to identify high-potential candidates while minimizing interview hours for senior personnel.

Evaluation criteria centered on:

- Articulation clarity, structural communication, and listening capability.
- Corporate alignment, coachability indices, and professionalism.
- Foundational conceptual familiarity and contextual learning velocity.
- Role alignment, schedule availability, and operational commitment.
- Baseline employability metrics and potential corporate impact.

This systematic selection process provided deep exposure to candidate assessment psychology, objective scorecard grading, and talent selection frameworks.

7.4 LinkedIn Business Page Development

To establish a sustainable, zero-cost inbound channel for applicant sourcing and digital brand positioning, a formal corporate LinkedIn business profile was constructed and actively managed.

Key structural milestones achieved:

- Built out the official corporate brand interface, descriptive copy, and tags from scratch.
- Scaled audience metrics organically from 0 to 25 verified professional followers.
- Sourced 2 high-intent inbound corporate internship inquiries through content positioning.
- Published targeted digital updates to project employer branding and corporate training environments.
- Positioned company roles to draw organic applicant interest from student networks.

This track showed how corporate social media channels can act as highly efficient, low-cost talent acquisition engines that reduce reliance on paid job boards.

7.5 Business Development Contribution

To gain direct, fast-paced exposure to revenue-facing functions, direct sales and commercial outreach assistance was extended to Pikaso Entertainment, a consumer-facing subsidiary of the firm.

Core deliverables handled:

- Direct lead qualification, audience interactions, and subscription package pitches.
- Setting up follow-up schedules across hesitant customer pipelines.
- Applying value-objection handling techniques to close pricing agreements.

Commercial results generated: Successfully closed and processed two multi-month premium subscription sales, generating ₹1,998 in gross revenue. This practical experience built direct competencies in sales pipeline mechanics, transactional conversion math, and outbound consumer business development loops.

7.6 Advanced Excel Project

A technical data cleaning and reporting sandbox was designed to build advanced technical reporting and data architecture skillsets.

The technical scope of the model included:

- Assembling multidimensional Pivot Tables and cross-tabulated reporting layers.
- Mapping data relationships via Power Pivot arrays to avoid spreadsheet bloating.
- Deploying exact logical search lookups via nested VLOOKUP and clean XLOOKUP arguments.
- Formulating index matching systems using advanced INDEX-MATCH vectors.
- Applying advanced data cleaning scripts, Flash Fill arrays, and text parsing routines.
- Hardcoding exact Data Validation tables to completely stop manual input typos.
- Integrating high-visibility Conditional Formatting logic to instantly isolate outlier rows.
- Engineering automated executive dashboards featuring dynamic reporting visualization charts.

This sandbox project built solid, practical expertise in transforming unformatted operational rows into high-integrity, boardroom-ready business reporting systems.

7.7 SEBI and Trading Research Project

A comprehensive financial regulatory research paper was authored to thoroughly unpack Indian market structures, investor protections, and active transaction regulations.

Core thematic areas analyzed:

- Operational history, enforcement tools, and statutory oversight capabilities of SEBI.
- structural taxonomy of Indian capital markets (NSE/BSE) and intermediary networks.
- Settlement timelines and clearing constraints across liquid spot markets.
- Pricing dynamics and margin constraints across heavily leveraged derivative markets.
- Order book execution logic, auction engines, and high-frequency trading pathways.
- Statutory investor compensation setups and systemic risk mitigation rules.

- Central clearinghouse margin rules and physical versus cash settlement models.
- Recent regulatory pivots regarding algorithmic trading and consumer protection frameworks.

This deep review strengthened my analytical research capabilities and built a solid understanding of macro-financial compliance, exchange parameters, and institutional trading risks.

SUMMARY OF OPERATIONAL KEY PERFORMANCE INDICATORS (KPIs)

Operational Activity Parameter	**Total Quantitative Performance Deployed**
Target Institutional Channels Identified and Logged	104 Universities
Campus Partnerships Activated via formal JD Placement	36 College Cells
Incoming Student Profiles Processed through Sourcing Loops	40 Candidate Files
Evaluated Candidates Advancing to Shortlist Arrays	28 Profiles
Interactive Group Evaluation Assessment Rounds Executed	5 GD Sessions
Formal Interview Touchpoints Moderated and Evaluated	50+ Completed Rounds
Incoming Trainees Successfully Advancing to Onboarding	23 Onboarded Interns
LinkedIn Institutional Followership Built from Scratch	25 Organic Followers
Inbound Inquiries Sourced directly via Digital Pipeline	2 Inbound Sourcing Leads
Gross Revenue Generated for Subsidiary via Outbound Track	₹1,998 Commercial Revenue

8. FRAMEWORK AND METHODOLOGY OF ANALYSIS

8.1 Recruitment Funnel Framework

To diagnose process delays and measure conversion drops, the entire talent acquisition lifecycle was mapped through a strict, multi-tier operational conversion funnel framework. This approach tracks the step-by-step movement of candidates from early sourcing contact to final onboarding: College Outreach (104) -> JD Placement (36) -> Profiles Sourced (~40) -> Shortlisted (28) -> Assessments (5 GDs) -> Interviews (50+) -> Onboarded (23). This framework allowed us to isolate the exact processing stages where talent dropped off, pointing directly to where manual scheduling delays were hurting our conversion efficiency.

8.2 Digital Outreach Framework

The organic expansion of the company's LinkedIn business page was evaluated using a systematic digital engagement funnel framework. This structure measures how effectively

raw online impressions are converted into useful candidate inquiries: Profile Design -> Targeted Content Visibility -> Organic Audience Growth -> Inbound Engagement -> Lead Capture. This framework helped us track how well our digital branding content directly triggered inbound messages from prospective applicants, saving on marketing spend.

8.3 Data Analytics Framework

The handling of business data within both the recruitment tracking logs and the Advanced Excel project followed a strict five-stage data analytics lifecycle framework:

Raw Data Capture -> Data Cleaning & Error Trapping -> Cross-Tabulated Analysis -> Dashboard Visualization -> Strategic Decision Input.

Using this framework across our tracking operations highlighted how cleaning up input data directly speeds up background processing and improves reporting accuracy for leadership.

9. KEY ANALYTICAL DEVELOPMENTS AND FINDINGS

Finding 1: Sourcing Functions Operate Strictly as a Leak-Prone Funnel.

The data showed clear conversion drops at every stage of the pipeline. Out of 104 universities contacted, only 36 actively posted our role descriptions, and a portion of shortlisted applicants failed to complete the final onboarding steps. This confirms that talent acquisition must be managed as a conversion funnel requiring steady pipeline volume, rather than a flat, predictable task list.

Finding 2: Tier-2 Campus Ecosystems Yield Vastly Superior Conversion Metrics.

An interesting trend emerged: Tier-2 regional universities responded much faster and with higher student engagement than several premium tier institutions. Simpler communications and strong student motivation led to higher application rates, proving that Tier-2 networks are highly efficient talent sources for lean organizations.

Finding 3: Disciplined Multi-Touch Follow-Up Cadences Drive Conversion

Single-point cold outreach campaigns frequently stalled in institutional backlogs. Implementing structured, multi-touch follow-up cycles across email and phone lines significantly improved university response rates, proving that consistent follow-ups are critical to keeping the sourcing pipeline moving.

Finding 4: Standardized Tracking Layouts Radically Reduce Process Overlap

Using legacy, unvalidated spreadsheets often caused team coordination errors and duplicate data rows. Introducing clear, dropdown-validated Excel sheets instantly improved team visibility, cleaned up tracking views, and reduced background coordination friction.

Finding 5: LinkedIn Page Inbound Flow Offers Zero-Cost Talent Pathways

The corporate LinkedIn page successfully drew direct candidate applications without any paid advertising spend. This proves that even basic digital branding can open low-cost sourcing channels that lower overall candidate acquisition expenses.

Finding 6: Skills Readiness Varies Considerably Across Campus Demographics

Candidate performance data across the 50+ interview rounds showed huge variations in technical readiness and communication baselines between different college groups. This highlights why firms need clear, automated screening filters early in the process to protect team interviewing hours.

Finding 7: Strict Upstream Data Governance Unlocks Back-Office Speed

Manual data errors frequently caused reporting delays and blocked pipeline visibility. Enforcing clean data rules at the point of entry cut back-office processing times, simplified reporting, and let leadership make faster operational adjustments.

10. SUCCESS INDICATORS

10.1 Organizational Success Indicators

The operational value delivered to Airway Media was evaluated against these corporate metrics:

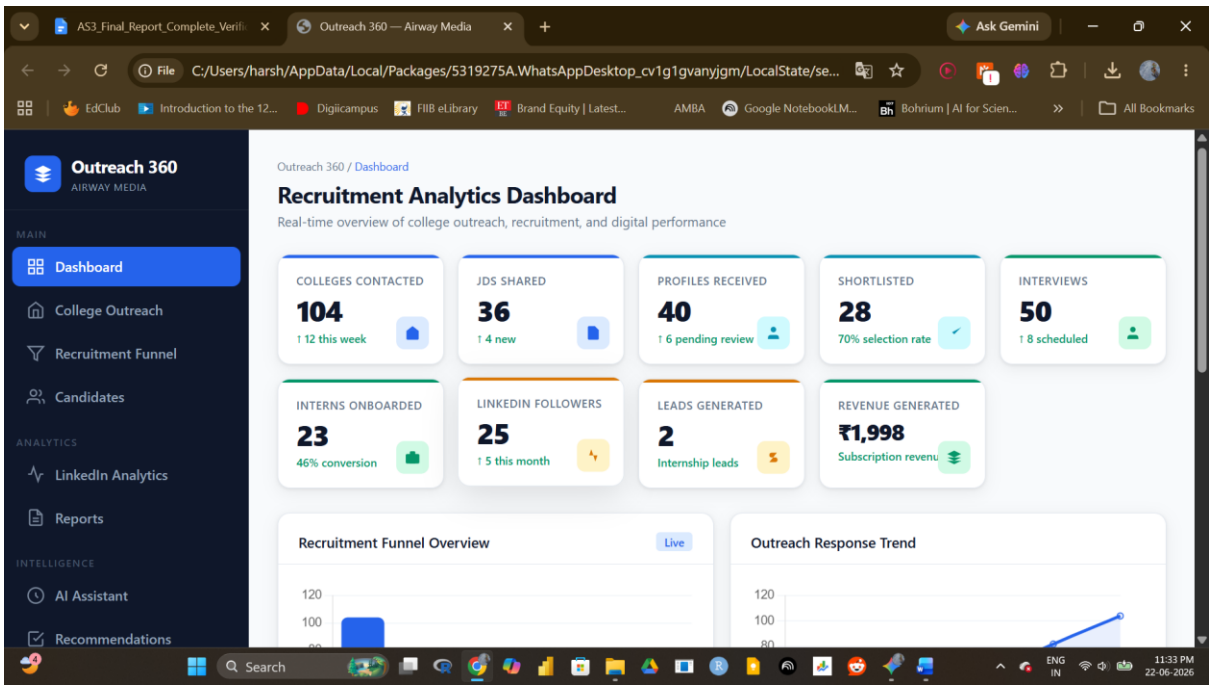

- Expanded the active university sourcing network to 104 logged institutional pipelines.
- Increased brand footprint by successfully placing JDs within 36 new campus ecosystems.
- Streamlined processing velocity across a 50+ interview lifecycle.
- Successfully onboarded 23 pre-screened interns into active corporate tracks.
- Built the firm's organic digital footprint from zero to 25 engaged followers on LinkedIn.
- Directly generated ₹1,998 in commercial revenue for the Pikaso Entertainment subsidiary.

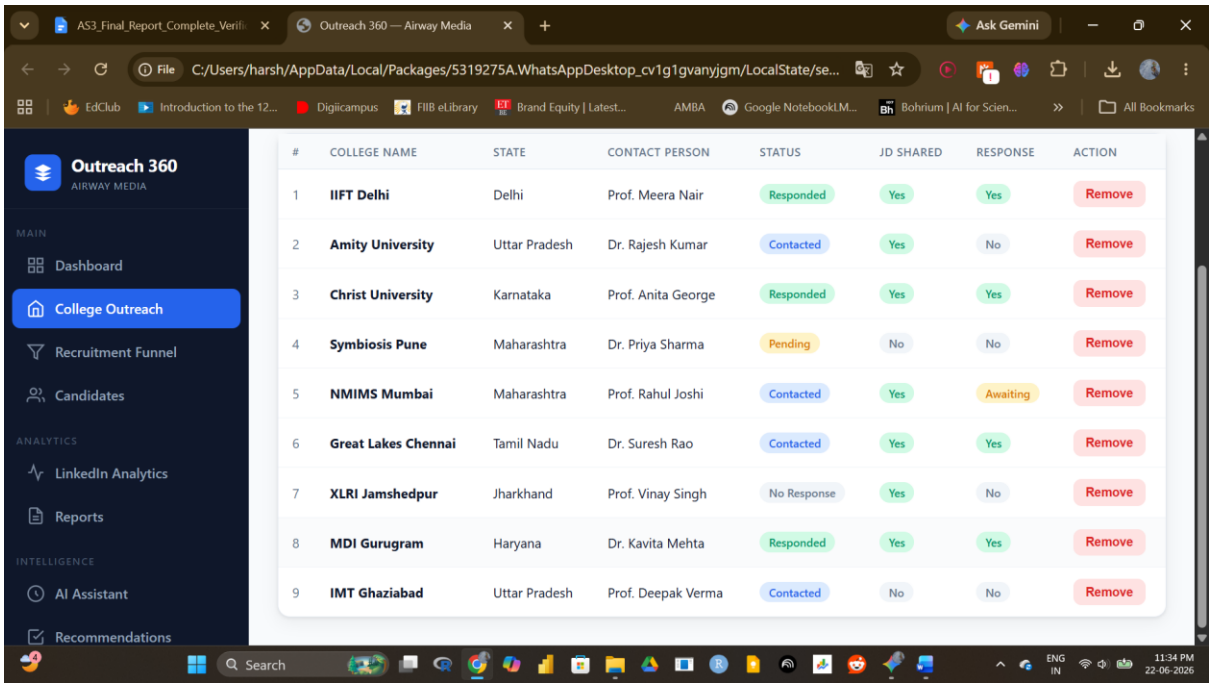

10.2 Academic Success Indicators

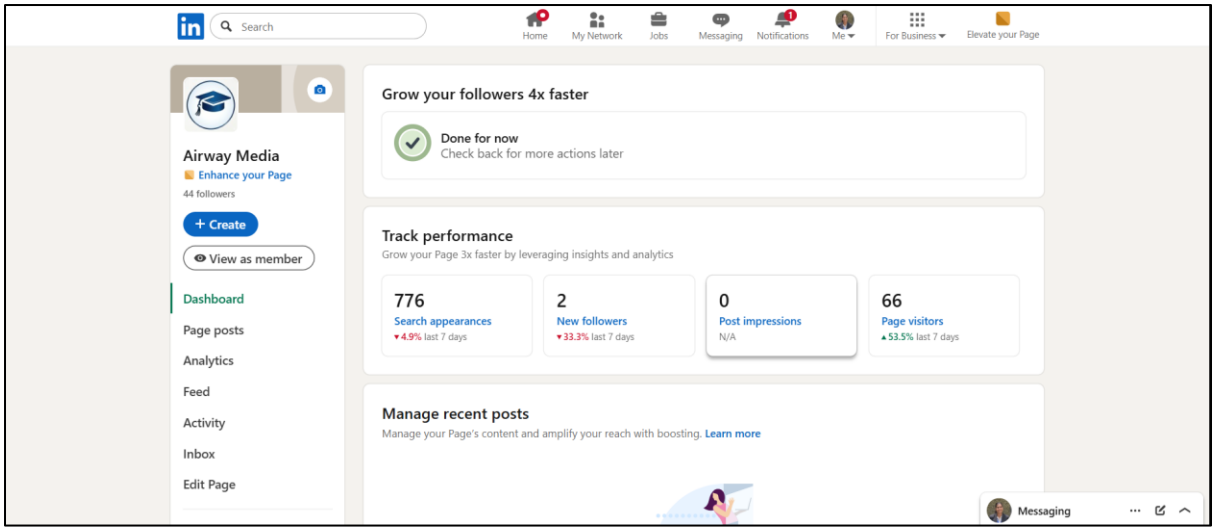

Core competency developments were measured against these corporate management training goals:

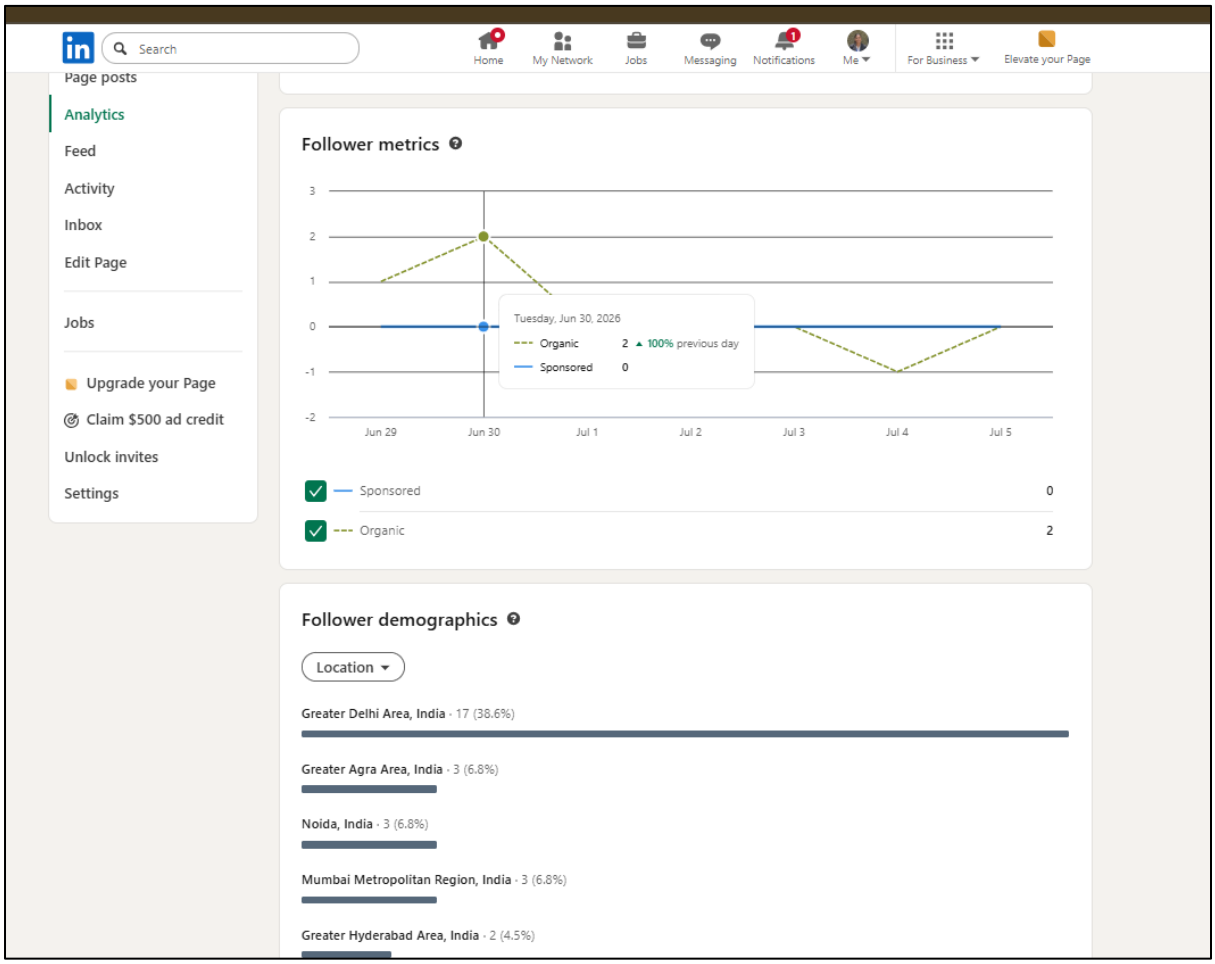

- Applied core operations and funnel analysis frameworks to real-world corporate data challenges.
- Built hands-on skills in high-volume workforce management and cross-functional corporate communications.
- Designed dynamic corporate reporting models using relational functions in Advanced Excel.
- Built an in-depth understanding of SEBI capital market regulations and exchange execution risks.
- Unpacked direct B2C conversion dynamics and outbound customer acquisition psychology.
- Designed and tested a functional, low-cost AI prompt framework to automate administrative processing.
